

PEARL: For WinOMS CS Software

A Simple, Powerful, Mobile Link to Your Practice

Remote access to your oral surgery practice.

Featuring two-way data flow and intuitive navigation that is customized for your iPhone or Blackberry, the PEARL module is a Simple, Powerful, Mobile solution for oral surgeons on the GO! The new Kodak PEARL module delivers a comprehensive system for wielding your practice information and accommodating workflow while you are away from your office. Access your WinOMS CS practice management software – using nothing more than your smartphone.

Keep tabs on your patients and referrals.

The PEARL module keeps you up to speed on your patients' most relevant details. The helpful call list feature keeps track of your follow up calls to patients and then records the outcome of the conversation. You can search the patient list to access that patient's clinical profile to find essential information such as the patient's medications, insurance, appointment history and schedule, and any medical or financial alerts. You can even view radiographic images – with the ability to zoom and pan! You can also view referring doctor profiles, complete with their biographical and professional information.

Financial well-being at a glance.

Stay financially on track. Easy-to-read bar graphs help you monitor statistics, such as production or collections, for individual doctors, offices, or the practice as a whole. Choose from a variety of time periods to ensure that you are meeting your monetary goals.

Know where you're going.

You can check your schedule while you're on the go! Simply tap on an appointment to display the details and access the patient's clinical profile.

A simple, powerful, mobile link to your practice.

Get even more from your practice management software.
